

## Window Protection

Protecta Window™ is a self adhesive temporary glass protection film. Suitable both for internal and external use it stops paint and mortar splashes landing directly on the glass removing the need for scraping and cleaning, which invariably leads to scratching and expensive replacement costs. Simply and quickly applied, either by hand or with our specially designed applicator, Protecta Window™ will save not only on replacement glass costs but will also significantly reduce your clean up time prior to hand over.

- **QUICKLY APPLIED**

Either by hand or with our specially designed applicator.

- **FIXING**

Self adhesive, does not require tape or additional fixing.

- **STAYS IN PLACE**

Once smoothed into position Protecta Window™ will not 'fall away'.

- **REMOVES CLEAN**

Specially formulated adhesive will not leave residue.

- **EXCELLENT PROTECTION**

Forms an excellent barrier against liquid splashes and prevents scratching.

- **UV PROTECTED**

Safe to use both internally and externally.

- **VERSATILE**

Can also be used on various non-porous surface.

| WP600 | Blue Window Film | 100mtr |

## Protectapeel Spray On Window Protection

Protectapeel is a unique product which may be either spray or roller applied onto a range of substrates, normally windows, uPVC doors, baths, sinks and many other non porous finishes. This product provides a very durable, tough and UV resistant protection for many surfaces. In spray application the product can be used to protect 1.2m x1.8m a window literally in under a minute, yet unlike more conventional protective film, the product will last until you decided to remove it.

The product does not become brittle or bond to substrates after months of exposure to the elements, quite the reverse, the product will still peel cleanly away after months of varying weather conditions.

With Protectapeel there is no longer any need to protect delicate surfaces 2, 3 and even 4 throughout the duration of a contract. Once is quite sufficient and is all that is generally needed.

Have your protection where it was supposed to be, not blowing away in the wind or on the floor. Protectapeel, the high performance peelable protection system.

### Protectapeel Quick Reference Guide

External Weather Resistance:

\*Coverage rates @ 100 microns, Dry (wet 250 microns):

Minimum thickness flat surfaces:

Minimum thickness irregular surfaces:

Colour:

\*\*Drying time:

Shelf life:

\*These rates are based on an average of 100 microns overall.

\*\*Approximate drying times which may vary with weather & moisture conditions.
